Summary

Software engineer with 1.5+ years at EdgeVerve (Infosys) building the Retrieval Engine, a generic, high-performance data-retrieval microservice in Java/Spring Boot used by 5+ interdependent products of an enterprise core banking platform. Own it end to end: design, query optimization, Kafka event publishing, Redis caching, Docker builds, Jenkins CI/CD, and deployment as Kubernetes pods on AWS EC2.

Experience

EdgeVerve Systems (Infosys Subsidiary) Feb 2025 – Present
Product Engineer — Retrieval Engine, Core Banking Platform *Bangalore, India*

- Designed and built the **Retrieval Engine**, a generic Spring Boot microservice that fetches and assembles data across 5+ interdependent banking products, each with its own schemas and tables, through one reusable code path.
- Generalized product-specific retrieval logic into reusable abstractions: analyzed how each new product differed from existing ones and extended the shared design, replacing per-product if-else branches so new products plug in without rewriting core code.
- Improved retrieval performance for high-volume banking data using query rewriting, indexing, batching, parallel fetching, and caching, chosen per use case.
- Built event publishing to Kafka: the engine publishes retrieval events to topics that consuming products read asynchronously, decoupling producers from consumers; integrated Redis caching for frequently accessed data.
- Containerized the engine with Docker and deployed it as Kubernetes pods on AWS EC2, with a tailored configuration per consuming product; build and release through Jenkins CI/CD pipelines.
- Debugged production and deployment issues across environments and wrote integration guides for the product teams consuming the engine.

BikerBuds Jan 2023 – Apr 2023
Software Developer Intern *Berkeley, CA (Remote)*

- Developed responsive interfaces with React.js and Tailwind CSS, built RESTful APIs with Node.js and Express.js, and implemented Redux state management.

Projects

AI-Driven Dental Healthcare System | *React.js, Node.js, Express.js, MongoDB, TensorFlow.js, JWT*

- Built a full-stack dental care platform where patients book and manage appointments, and dentists view schedules and patient records through role-specific dashboards.
- Added hands-free accessibility: voice commands and camera-based hand-gesture controls let users navigate and act without touching the screen.
- Integrated an in-browser TensorFlow.js model that analyzes uploaded dental images to flag likely conditions (e.g. cavities) for early screening; secured Node.js/Express REST APIs with JWT.

Wanderlust – Travel Platform | *Node.js, Express.js, MongoDB, EJS*

- Built a travel listing platform where users browse, create, edit, and review hotel and stay listings, following a clean MVC architecture (models, routes/controllers, EJS views).
- Implemented full CRUD for listings and reviews with MongoDB, server-side validation, and centralized error handling.

Technical Skills

Languages: Java, C++, SQL, Python, JavaScript, TypeScript
Backend & Distributed Systems: Spring Boot, Microservices, REST APIs, Kafka, Redis, Node.js, Express.js
Cloud & DevOps: AWS EC2, Docker, Kubernetes, Jenkins, CI/CD Pipelines, Git, Maven, Linux
Databases: PostgreSQL, MySQL, MongoDB **Frontend:** React.js, Redux, Tailwind CSS
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design, Design Patterns, Debugging

Education

Dr. D. Y. Patil Institute of Technology Pune, India
B.E. in Artificial Intelligence & Data Science — CGPA 9.2/10 *2021 – 2025*

Achievements

- Developer of the Year — awarded for innovation at a competitive hackathon.
